CERTIFIED HIGH-PERFORMING HOMES
BUILDING ENERGY EFFICIENT, GREEN HOMES SINCE 2001

A LOOK INSIDE THE BECKET'S ENERGY EFFICIENCY. Each point decrease in the HERS Index means a 1% reduction in energy consumption. Based on this, the Becket is 74% more energy efficient than a typical used home. The HERS Index is a scoring system created by the Residential Energy Services Network (RESNET), and provides comparable energy efficiencies in various homes. Only a RESNET certified independent energy rater can determine a home's score. This energy scale is based on the U.S. Department of Energy's EnergySmart Home Scales. Actual energy savings may vary depending on a number of factors including the number of people living in the household, consumption habits, age/condition of electronics and appliances used, and lifestyle; and are not guaranteed.

*Estimated average monthly energy bill savings with the Becket. The costs were calculated using REM/Rate™ 12.97 and the HERS Score for the reference homes listed in the arrow chart and were published by RESNET, as compared to the typical used home. The typical used and new home scores were determined by the U.S. Department of Energy.
